

Class Project U1.

Probability Measure on Random Variables

Instructions

The objective of this Class Project U1 is to create a presentation that clearly explains the concepts of Conditional Probability, Bayes' Theorem, and the Law of Total Probability. Students must demonstrate their understanding by including definitions, formulas, solved examples, and applications of each concept.

Requirements

- Create a presentation using PowerPoint, Canva, or a similar tool.
- The presentation must contain between 5 and 10 slides.
- The content should be clear, organized, and technically sound.
- Include diagrams, probability trees, tables, or other visual aids whenever possible.
- Concepts could include:
 - Definition
 - Formulas and explanations
 - At least one solved example
- Use proper and academic language throughout the presentation.
- Include references in APA format at the end.
